

Silverwood Cloche Model FC4

PRICE LIST July 2019

Cloche systems offer protection from wind, rain and hail. Suitable for a market garden, plant nursery or home garden.

Asian vegetables, herbs and a wide range of other vegetables, such as tomatoes, zucchini and strawberries are all successfully grown in Silverwood Cloches.

This simple design has been around for many years. Previously, cloche designs were limited to single rows very low to the ground. Our Cloches can be made to any length to suit your requirements.

The centre height of the Cloche, is around 2.1 metres, giving enough clearance to work inside.

The Cloche is accessed by lifting the cover up on either or both sides. This allows easy access and cross flow ventilation. The cover is held up by the friction of ropes against the frame. Easy erection and removal makes this cloche system cost effective for moving to different areas on the farm.

Hinged doors, doorposts and side clamping etc, are offered as an option.

FC4 CLOCHE KIT
